Atascosa County reports 4th case of COVID-19

Atascosa County is reporting the 4th case of COVID-19, the disease caused by the new coronavirus, in a county resident. The individual is currently hospitalized in Bexar County. It has been determined that the case is associated with community spread of the virus.

The Texas Department of State Health Services is supporting Atascosa County in identifying any close contacts of the patient while sick, so they can be isolated and monitored for symptoms and quickly tested, if needed.

Judge Hurley says, “This is the time to use extra caution. To use a mask (gloves if appropriate) when you may be less than 6 feet from someone outside your home. The next two to three weeks are critical. Thank you!”

There are things everyone can do to help prevent the spread of COVID-19:

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use an alcohol-based hand sanitizer.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then wash your hands.
- Clean and disinfect frequently touched objects and surfaces.

Minimizing exposure is especially important for people who are 65 or older or who have an underlying health condition like heart disease, lung disease, diabetes, high blood pressure or cancer. People in those groups have a higher risk of developing severe disease if they do get COVID-19, and the safest thing for them during an outbreak will be to stay home as much as possible and minimize close contact with other people. To get ready, they should talk to their doctor about getting additional prescription medications and have enough household items and groceries on hand to stay home as needed.
